TUBA

Tuba brand is the largest producer of Bukhara plums in the Middle East. This brand tries to provide its customers with a quality product in global standards by using sanitary packaging.

TUBA

Bukhara plum is a fresh plum that has been subjected to the drying or dehydration process. These plums can be obtained from natural drying and through the influence of sunlight. This process is the most widely used traditional method for preserving fruit.

TUBA

Properties of Bukhara plum

It contains carbohydrates, vitamin A, vitamin B complex, potassium, vitamin K, magnesium, calcium, manganese, copper, zinc and dietary fiber.

TUBA

- ✓ Cardiovascular problems
- ✓ Lower cholesterol levels

TUBA

Bukhara plum varieties

- ✓ French
- ✓ Muir
- ✓ Tolar Giant

TUBA

French Bukhara plum

This type of plum is available in different packages for the consumer. The fresh fruit is medium in size and egg-shaped. The skin is dark red to purple. Its flesh is tasty, uniform, non-porous and also golden yellow. The kernel is small, uniform, flat and also long oval. The collection time is usually between summer and autumn.

TUBA

Muir Bukhara Plum

Very large and its skin is dark red. The trees of this fruit blossom a few days later than the French trees, so they are collected about 10 days later.

TUBA

Tolar Giant Bukhara Plum

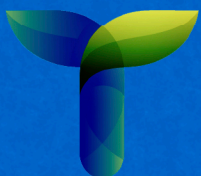

The size of this type of Bukhara plum is twice the size of the French plum. Their collection time is earlier than other types of Bukhara plums. Its color is dark purple and its drying time is more than 20 hours.

TUBA

The large collection of tuba has a high goal that includes customer satisfaction, and this goal is possible with the high quality of the product, hygienic and stylish packaging, and reasonable price.
